PROJECT 3

Platform Benchmark & User-Flow Teardown

India food delivery | Zomato · Swiggy · Domino's · EatSure

Audit date: 30 October 2026

Executive summary

This package completes the project framework and public desk-research pass. Public India app-store listing presence and official web properties were located for the four services. This does not constitute hands-on usability testing: installation, launch, locality-specific availability, task completion, fee display, friction and UX scores remain pending direct observation.

Public desk-research matrix

Service	iOS App Store	Google Play	Official web property
Zomato	Listing located	Listing located	Official site reachable; app-forward
Swiggy	Included in India Food & Drink listing	Listing located	Official app landing page reachable
Domino's	Listing located	Listing located	Official online-ordering site reachable
EatSure	Listing located	Listing located	Official ordering site reachable

Scope and scoring

Task: set location → discover restaurant → inspect menu item → add to cart → review fees → reach checkout without ordering. Platforms: iOS App Store, Google Play, mobile web, desktop web. Score 1–5 (1 poor/difficult, 3 acceptable, 5 excellent); blank means not tested; N/A only when genuinely not applicable.

Six categories and 12 criteria

- **Discoverability:** store/search visibility; value proposition clarity.
- **Access & availability:** access reliability; location setup.
- **Menu & item information:** outlet discovery; item information completeness.
- **Pricing transparency:** price clarity; fee transparency.
- **Cart & checkout:** cart control; checkout progression.
- **Trust & support:** trust information; help and policy clarity.

Evidence status

Completed: audit framework, 12 criteria, six categories, flow-step template, friction log, scorecard, summary formulas, recommendation tracker, public listing/site research and source register.

Pending direct testing: app install/launch, address-specific availability, all task-stage observations, actual fee breakdowns, screenshots/recording timestamps, validated friction, UX scores and evidence-backed recommendations.

Do not present store ratings as usability scores. Do not claim nine observed friction points or four validated recommendations until field evidence supports them.

Fieldwork checklist

■ Use the same locality and comparable device/network conditions.

■ Record the six task stages for each brand/platform tested.

- Capture exact item price and every displayed fee line.
- Stop at the pre-order checkout stage; do not place an order or enter payment details.
- Reference each observation with a screenshot or recording timestamp.
- Complete the friction log, scorecard and recommendations only after reviewing evidence.

Source URLs and limitations are listed in the workbook's Public Source Register and the accompanying CSV.
